Innovation Working  
for You!

In many comparable applications, the CycloBlower operates more efficiently than other straight-lobe blowers. By requiring less brake horsepower (BHP) energy operating cost can be realized and greatly reduced.

CYCLOBLOWER H.E. VS. STRAIGHT LOBE

BLOWER TECHNOLOGY	BHP USED @ 15 PSI	ENERGY COST PER YEAR
Standard Straight Lobe	163	<b>\$106,695</b>
CycloBlower H.E.	129	<b>\$84,604</b>

**\$22,090**  
ANNUAL SAVINGS

\*Calculations based on the cost of providing 2,000 cfm of air for 8760 hours (1 year of 24/7 operation) assuming motor drive efficiency of 90% and electricity cost of \$0.09/kWh.

# HIGH PRESSURE CAPABILITY

- Force Feed Lubrication required for:
  - Pressures above 20 PSI
  - Vacuum above 18"Hg
- Maintains optimum oil temperatures
- Filters the oil
- Monitors oil temperature and pressure
- Maintains vacuum on the oil sump
- Injects oil at critical locations
  - Injects oil into bearings at optimal point
  - Injects oil onto gears in the ideal location
- System utilizes 220V/240V, 50Hz/60Hz single-phase electric supply
- JIC Hose Connections

## Protected System with Smart Controls:

- The Force Feed Lubrication Pallet monitors the system within specified fault limits.
- If any sensors detect operation outside limits, contacts in the control box go into fault condition.
- Fault Contacts -Two fault contacts (one normally open, one normally closed) are provided to indicate a lubrication system fault.
  - At least one fault contact must be used to disable the main blower motor.
- Remote Control Contact -A remote RUN/RESET contact is also available. With the manual system control switch in the ON position, a closure between the remote run contact energizes the fan and activates the time delay relay.
