

Metallic

Air Operated Diaphragm **Pump**

Max Flow:

115 GPM with 105 psi air supply **FEATURES**

- Stall-Free Design A patented noncentering, spring assisted shifter is incorporated into every "Y" series pump, ensuring a positive shift every time. All "Y" series pumps eliminate the need of pre-packing or extended lubrication.
- Oil-less Operation Oil-less operation "Y" series pumps incorporate no metalto-metal wearing surfaces. This design means no oil misting into environment that would create an unhealthy working condition, and no oil, lubricants or grease to contaminate your products. Our oil-less design results in lower operating and maintenance costs.
- Quiet Operation Air valve design minimizes exhaust noise providing a significantly quieter work environment.
- Portable/Simple Installation Simply connect your air supply line and liquid lines; the pump is now ready to perform. There are no complex controls to install and operate.
- Submersible If external components are compatible, these pumps can be submerged in the liquid by simply running the exhaust line above the liquid level.

AOD1.5 - *(-P, -K)

*Pump Body Materials

P - Polypropylene †

K - Kynar® (PVDF)

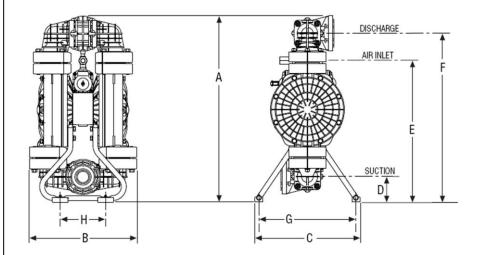

Elastomers

Buna-N Santoprene® Neoprene Teflon® Nordel® Viton®

Applications

- Aircraft Industry
- Automotive
- Beverage Industry
- Chemical and Petroleum
- Glass and Fiberglass

- Marine
- Metal and Steel
- Mine and Construction
- Paint
- Paper and Wood

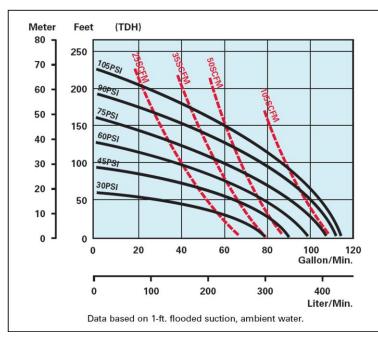

MODEL (Dimensio	Polypro, Kynar [®] AOD1.5-xxxx-Y		
SUCTION (Bottom)	Inches	1 1/2 ANSI Flange*	
DISCHARGE (Top)	Inches	1 1/2 ANSI Flange*	
A – Total Height	Inches (mm)	29.50 (750)	
B – Total Depth	Inches (mm)	15.75 (400)	
C – Total Width	Inches (mm)	12.20 (310)	
Air Inlet Size		1/2" FNPT	
Air Exhaust Size		3/4" FNPT	
D – Suction Dimension	Inches (mm)	4.4 (112)	
E – Air Inlet Dimension	Inches (mm)	23.46 (596)	
F – Discharge Dimension	Inches (mm)	26.9 (682)	
G – Mounting Dimension	Inches (mm)	10.83 (275)	
H – Mounting Dimension	Inches (mm)	7.83 (200)	
NOTE: Pump dimensions may vary depending on configuration. Dimensions are to be used for reference only.

The performance curves shown and other published literature reflect an average performance for all materials and all elastomers, including Teflon®. Derating of the performance is not necessary for Teflon® fitted pumps.

To determine the correction flow rate, find the intersection of the VISCOSITY on the above curve and read the FLOW CORRECTION FACTOR. Multiply this factor by the desired flow of the pump and use this new flow rate to select a pump from the performance curves.

Example \triangle 10,000 **CPS** = 2.5 Flow Correction Factor.

If viscous flow desired is 42 GPM, then multiply 42 by 2.5 = 105 (GPM equivalent water flow)

Example A 74,000 SSU = 4.0 Flow Correction Factor.

If viscous flow desired is 35 GPM, then multiply 35 by 4.0 = 140 (GPM equivalent water flow)
